

## AWS Questions Grouped by Answer

| Answer                               | Questions                                                                            |
|--------------------------------------|--------------------------------------------------------------------------------------|
| <b>Amazon S3</b>                     | Question #1, Question #18, Question #87, Question #153, Question #313, Question #450 |
| <b>Amazon EC2</b>                    | Question #16, Question #112, Question #230, Question #233, Question #467             |
| <b>AWS Trusted Advisor</b>           | Question #10, Question #126, Question #273                                           |
| <b>AWS CloudTrail</b>                | Question #41, Question #155, Question #244, Question #435                            |
| <b>Amazon DynamoDB</b>               | Question #55, Question #66, Question #369                                            |
| <b>AWS Secrets Manager</b>           | Question #72, Question #217, Question #526                                           |
| <b>AWS Cost Explorer</b>             | Question #9, Question #331, Question #396                                            |
| <b>AWS CloudFormation</b>            | Question #19, Question #78, Question #353, Question #517                             |
| <b>Spot Instances</b>                | Question #57, Question #67, Question #524                                            |
| <b>Amazon CloudFront</b>             | Question #49, Question #275, Question #426                                           |
| <b>Amazon Athena</b>                 | Question #43, Question #318                                                          |
| <b>AWS Artifact</b>                  | Question #37, Question #457                                                          |
| <b>Amazon QuickSight</b>             | Question #14, Question #367, Question #452                                           |
| <b>AWS WAF</b>                       | Question #35, Question #124, Question #468                                           |
| <b>AWS Global Accelerator</b>        | Question #80, Question #86                                                           |
| <b>AWS Organizations</b>             | Question #21, Question #260, Question #405                                           |
| <b>S3 Glacier Flexible Retrieval</b> | Question #201, Question #456                                                         |

## Standalone Answers (Questions with Unique Correct Answers)

| Answer                                    | Question                                                                               |
|-------------------------------------------|----------------------------------------------------------------------------------------|
| <b>AWS Fargate</b>                        | Question #7                                                                            |
| <b>AWS Storage Gateway</b>                | Question #90, Question #103, Question #205, Question #255, Question #364               |
| <b>AWS Elastic Beanstalk</b>              | Question #17, Question #193, Question #323, Question #397, Question #451               |
| <b>AWS Direct Connect</b>                 | Question #21, Question #73, Question #326, Question #357, Question #466, Question #471 |
| <b>Amazon Inspector</b>                   | Question #2, Question #117, Question #175                                              |
| <b>AWS Config</b>                         | Question #221, Question #470                                                           |
| <b>Amazon Route 53</b>                    | Question #242, Question #476, Question #496                                            |
| <b>AWS Lambda</b>                         | Question #464                                                                          |
| <b>Amazon RDS</b>                         | Question #63, Question #190, Question #322                                             |
| <b>Amazon Aurora</b>                      | Question #61, Question #190, Question #370, Question #469                              |
| <b>AWS Outposts</b>                       | Question #62, Question #360                                                            |
| <b>Amazon AppStream 2.0</b>               | Question #64, Question #152                                                            |
| <b>Amazon WorkSpaces</b>                  | Question #64, Question #309                                                            |
| <b>AWS Firewall Manager</b>               | Question #197                                                                          |
| <b>Amazon FSx for Windows File Server</b> | Question #109, Question #196, Question #317                                            |
| <b>AWS Batch</b>                          | Question #207                                                                          |
| <b>Amazon Redshift</b>                    | Question #96, Question #332, Question #489                                             |
| <b>AWS Glue</b>                           | Question #14, Question #262, Question #430                                             |

| Answer                                     | Question                                                                  |
|--------------------------------------------|---------------------------------------------------------------------------|
| <b>Amazon Personalize</b>                  | Question #113                                                             |
| <b>AWS Compute Optimizer</b>               | Question #228, Question #374, Question #399                               |
| <b>AWS Secrets Manager</b>                 | Question #158, Question #217, Question #423                               |
| <b>AWS Security Hub</b>                    | Question #53, Question #284                                               |
| <b>AWS IAM Identity Center</b>             | Question #170, Question #339, Question #391, Question #474, Question #477 |
| <b>AWS Health Dashboard</b>                | Question #171, Question #226                                              |
| <b>VPC Flow Logs</b>                       | Question #119, Question #172, Question #310                               |
| <b>AWS Systems Manager Parameter Store</b> | Question #120                                                             |
| <b>AWS Auto Scaling</b>                    | Question #157, Question #363, Question #432, Question #465                |
| <b>Amazon Macie</b>                        | Question #58, Question #159, Question #229, Question #286, Question #416  |
| <b>AWS Shield</b>                          | Question #211, Question #223, Question #490                               |
| <b>Amazon Cognito</b>                      | Question #220, Question #394                                              |
| <b>AWS DataSync</b>                        | Question #304, Question #402                                              |
| <b>AWS CodeStar</b>                        | Question #306                                                             |
| <b>Amazon Neptune</b>                      | Question #308, Question #484                                              |
| <b>Amazon Lightsail</b>                    | Question #329                                                             |
| <b>AWS Compute Optimizer</b>               | Question #331                                                             |
| <b>Amazon Comprehend</b>                   | Question #333                                                             |

| Answer                                    | Question                                                                                              |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>AWS Artifact</b>                       | Question #37, Question #84, Question #174, Question #218, Question #287, Question #457, Question #479 |
| <b>AWS IAM Access Analyzer</b>            | Question #36, Question #83, Question #165, Question #202, Question #234, Question #385                |
| <b>AWS Backup</b>                         | Question #400                                                                                         |
| <b>Cost allocation tags</b>               | Question #401                                                                                         |
| <b>AWS CodeDeploy</b>                     | Question #421                                                                                         |
| <b>Amazon Connect</b>                     | Question #460, Question #488                                                                          |
| <b>Amazon Rekognition</b>                 | Question #485                                                                                         |
| <b>AWS customer carbon footprint tool</b> | Question #486                                                                                         |
| <b>Amazon ECS</b>                         | Question #492                                                                                         |
| <b>Amazon SNS</b>                         | Question #495                                                                                         |

| <b>A &amp; D</b> | Question #346                                                                                                                                      |
| <b>B &amp; C</b> | Question #428                                                                                                                                      |
| <b>B &amp; E</b> | Question #448, Question #482                                                                                                                       |
| <b>B &amp; C</b> | Question #498                                                                                                                                      |

| Category       | AWS Product                     | Brief Explanation                                                                                                     |
|----------------|---------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Compute</b> | <b>Amazon EC2</b>               | Provides scalable virtual servers to run applications.                                                                |
|                | <b>AWS Lambda</b>               | A serverless compute service that runs code in response to events without provisioning or managing servers.           |
|                | <b>AWS Fargate</b>              | A serverless compute engine for containers, eliminating the need to manage servers.                                   |
|                | <b>Amazon Elastic Beanstalk</b> | Simplifies application deployment by automatically handling infrastructure provisioning, load balancing, and scaling. |

| Category   | AWS Product            | Brief Explanation                                                                                                |
|------------|------------------------|------------------------------------------------------------------------------------------------------------------|
| Storage    | Amazon S3              | Object storage service for storing and retrieving any amount of data, offering high durability and scalability.  |
|            | Amazon EBS             | Block storage for use with Amazon EC2 instances, providing persistent storage.                                   |
|            | Amazon EFS             | Fully managed file storage for use with Amazon EC2 instances, supporting shared access.                          |
|            | Amazon S3 Glacier      | Low-cost storage for data archiving and long-term backups.                                                       |
| Databases  | Amazon RDS             | Managed relational database service supporting multiple database engines like MySQL, PostgreSQL, and SQL Server. |
|            | Amazon DynamoDB        | Fully managed NoSQL database service for key-value and document-based applications.                              |
|            | Amazon Aurora          | High-performance relational database compatible with MySQL and PostgreSQL.                                       |
|            | Amazon Redshift        | Fully managed data warehouse service for large-scale data analytics.                                             |
|            |                        |                                                                                                                  |
| Networking | Amazon VPC             | Allows users to create isolated virtual networks in the AWS Cloud.                                               |
|            | AWS Direct Connect     | Provides a dedicated network connection between on-premises data centers and AWS.                                |
|            | Amazon CloudFront      | Content delivery network (CDN) for delivering data, videos, and applications globally with low latency.          |
|            | AWS Global Accelerator | Improves application availability and performance by routing traffic through the AWS global network.             |

| Category         | AWS Product         | Brief Explanation                                                                                       |
|------------------|---------------------|---------------------------------------------------------------------------------------------------------|
| Security         | AWS IAM             | Manages access to AWS resources securely using roles, policies, and permissions.                        |
|                  | AWS WAF             | Protects web applications from common web exploits like SQL injection and cross-site scripting.         |
|                  | AWS Shield          | Protects applications from Distributed Denial of Service (DDoS) attacks.                                |
|                  | AWS Secrets Manager | Securely stores and rotates credentials, API keys, and other secrets.                                   |
| Analytics        | Amazon Athena       | Serverless query service for analyzing data stored in Amazon S3 using SQL.                              |
|                  | Amazon QuickSight   | Business intelligence service for creating interactive dashboards and visualizations.                   |
|                  | AWS Glue            | Managed ETL (Extract, Transform, Load) service for preparing and integrating data for analytics.        |
|                  |                     |                                                                                                         |
| Machine Learning | Amazon SageMaker    | Enables developers to build, train, and deploy machine learning models at scale.                        |
|                  | Amazon Rekognition  | Provides image and video analysis capabilities, such as facial recognition and object detection.        |
|                  | Amazon Comprehend   | Natural language processing (NLP) service for analyzing text and extracting insights.                   |
|                  |                     |                                                                                                         |
| Management Tools | AWS CloudFormation  | Enables infrastructure as code by allowing users to define and provision AWS resources using templates. |
|                  | AWS Trusted Advisor | Provides recommendations to optimize costs, improve performance, and enhance security.                  |
|                  | AWS CloudTrail      | Tracks user activity and API usage across AWS accounts for auditing and compliance.                     |

| Category               | AWS Product                                 | Brief Explanation                                                                                 |
|------------------------|---------------------------------------------|---------------------------------------------------------------------------------------------------|
|                        | <b>AWS Cost Explorer</b>                    | Helps users visualize and manage AWS costs and usage over time.                                   |
| <b>Migration</b>       | <b>AWS Migration Hub</b>                    | Tracks the progress of application migrations across AWS services.                                |
|                        | <b>AWS Database Migration Service (DMS)</b> | Simplifies the migration of databases to AWS with minimal downtime.                               |
|                        | <b>AWS Snowball</b>                         | Physical data transfer device for securely migrating large amounts of data to AWS.                |
| <b>Developer Tools</b> | <b>AWS CodePipeline</b>                     | Automates the build, test, and deployment phases of application development.                      |
|                        | <b>AWS CodeBuild</b>                        | Fully managed build service for compiling source code and running tests.                          |
|                        | <b>AWS CodeDeploy</b>                       | Automates application deployments to Amazon EC2, AWS Lambda, and on-premises servers.             |
| <b>IoT</b>             | <b>AWS IoT Core</b>                         | Connects IoT devices to the cloud and enables secure communication between devices.               |
| <b>Hybrid Cloud</b>    | <b>AWS Outposts</b>                         | Extends AWS infrastructure and services to on-premises environments for hybrid cloud deployments. |
|                        | <b>AWS Storage Gateway</b>                  | Connects on-premises environments to AWS Cloud storage for backup and archiving.                  |
| <b>Serverless</b>      | <b>AWS Lambda</b>                           | Runs code without provisioning or managing servers, charging only for compute time used.          |
|                        | <b>Amazon API Gateway</b>                   | Enables developers to create, publish, and manage APIs at scale.                                  |
